Build quality of the headphones is worst. The headband broke in 4-7 days and even after sticking it with feviquick they broke from other place. I was frustrated after the headband breaking again and again I took matter in my own hands and opened the headphones and applied aerolite on the headband with some support but the headband still bro even after applying aerolite. I have never thought that the boat headphones would have this bad quality. Even if they import from China they should at least give good quality for the price they are charging for the product. What is the point of advertising themselves is Indian brand when the import from China and have the worst quality of then all. All their money is wasted on advertisement by the celebrities. I am very dissatisfied with the quality of headphones and would never consider buying any headphones or product from boat. All my money is wasted on this headphone.
